RESEARCH EXPERIENCE

MLCS lab, Yonsei

Jul.2022 - Present

Advised by Prof. Jongeun Choi

Undergraduate Research Intern

- Real-world Diffusion-EDF pick experiment using Franka Emika Panda showcased live.
 - Designed the end-to-end pick and place experiment code, engineered with ROS, C++, and Python for Franka Emika Panda, achieving a 85% success rate.
 - Applied RTAB-Map and point cloud reconstruction techniques for visual point cloud data.
 - Led a team of 4 interns during the project.
- Reinforcement Learning (RL) project using Mujoco for custom mobile manipulation.
 - Engineered an interface with Gym, Mujoco, and customized URDF files for our custom robot.
 - Implemented Soft Actor-Critic (SAC) algorithm enabling the robot to move and pick the object with high manipulability.

Capstone Project

Jan.2022 - Jun.2022

Advised by Prof. Jong-Moon Chung

Team leader

- Study on Azure MEC Computation Offloading Based on 5G massive Machine-Type Communications (mMTC) and Ultra-Reliable and Low Latency Communications (URLLC).
 - Experimented IoT and UE Popularity-based Energy Optimization (IPEO) for data transfers based on real-time load and traffic conditions, using MATLAB and the AWS server.
